

SÖDRA ÄNGGÅRDEN

SOLSTUDIE

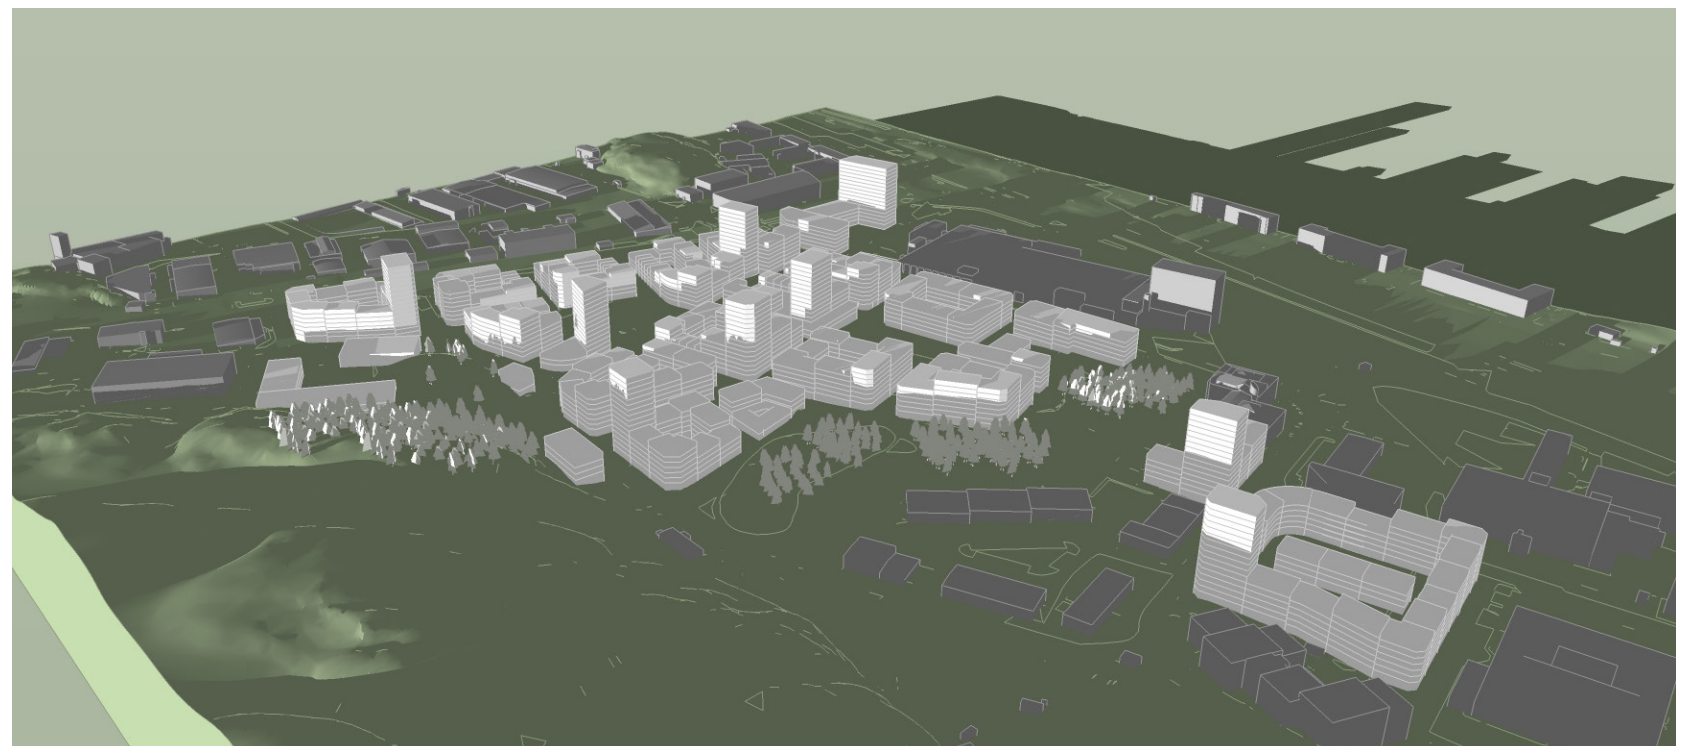

Studien är gjord i Sketchup med koordinaterna
57.664962N 11.939804E
För att illustrera situationen när solen står som
högst används normaltid för hela året. Det
innebär att våra klockor skulle visa +1 timma för
exemplen vid sommarsolståndet. Till exempel skulle
"sommarsolståndet 12:00" i studien inträffa 13:00 på
grund av sommartidsförskjutningen.
