SOLSTUDIE - PUNKTHUSENS PÅVERKAN PÅ BEFINTLIG FASAD

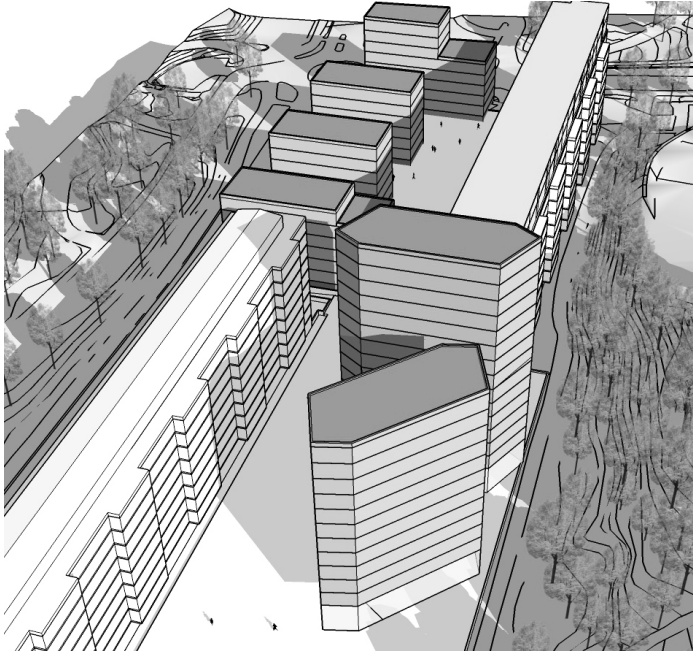

21 Mars - Vårdagjämning

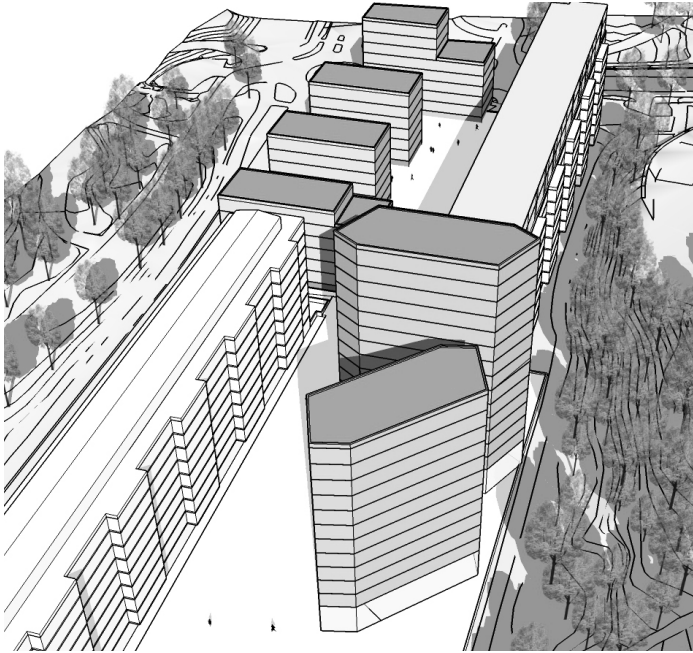

06:20
Soluppgång

08:00

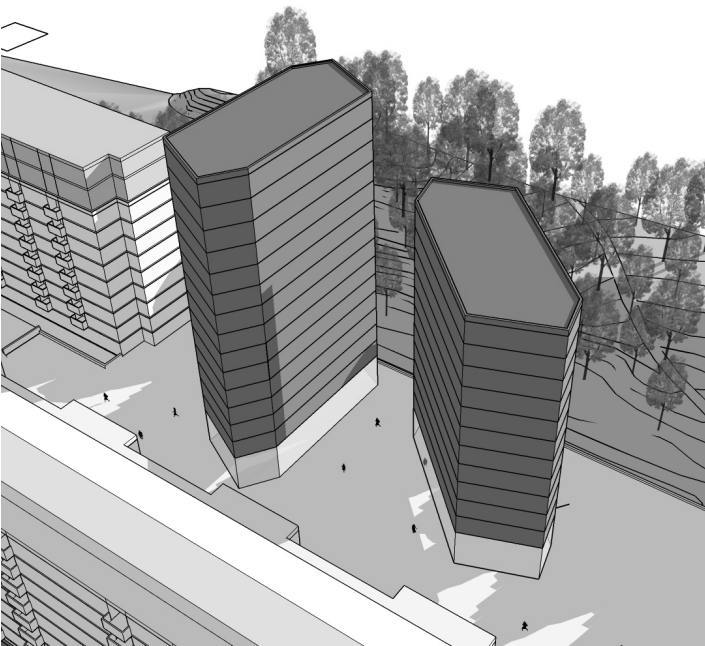

10:00

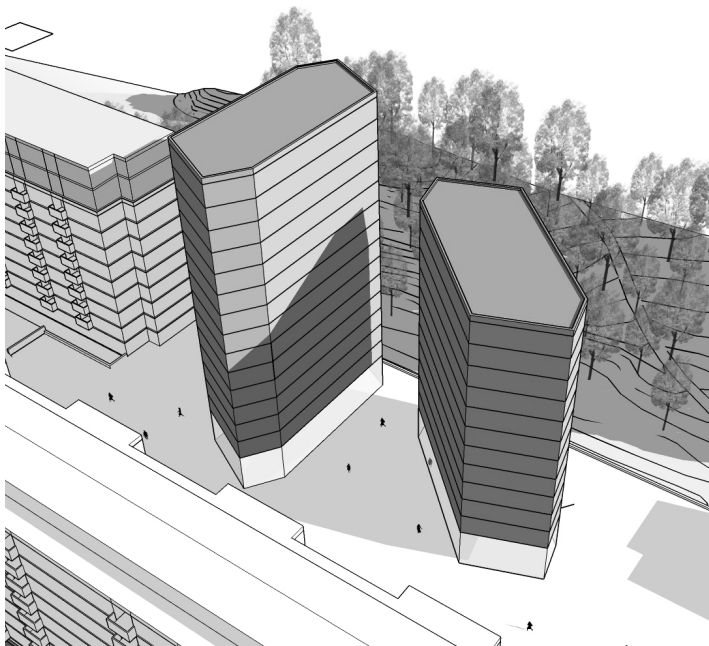

11:35
De nya punkthusen skuggar ej längre befintlig fasad.

SOLSTUDIE - LJUSFÖRHÅLLANDEN MELLAN PUNKTHUS

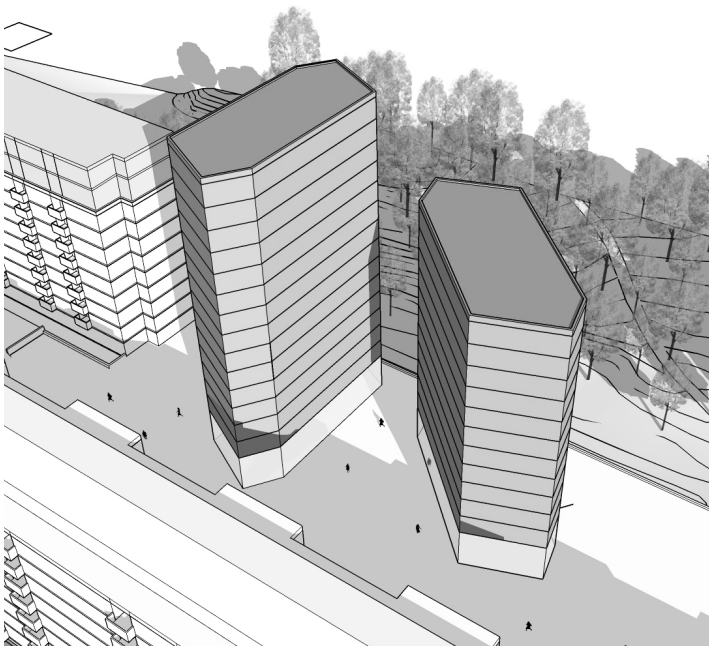

21 Mars - Vårdagjämning

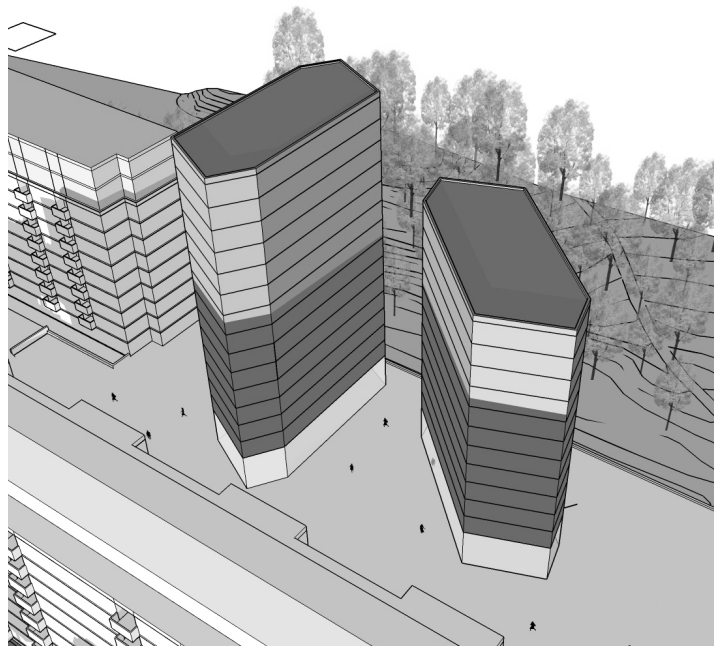

09:00

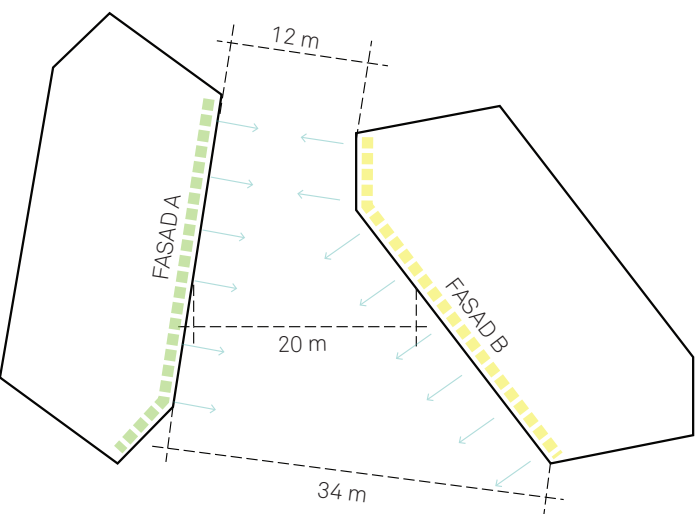

12:00

15:00

18:00

INSYN

Avståndet mellan fasad A och B är som minst 12 meter, vilket inte innebär mer insyn mellan lägenheterna i respektive hus än normalt. På grund av byggnadernas vridning från varandra ökar avståndet mellan dem drastiskt ut mot innergården.

FASAD A

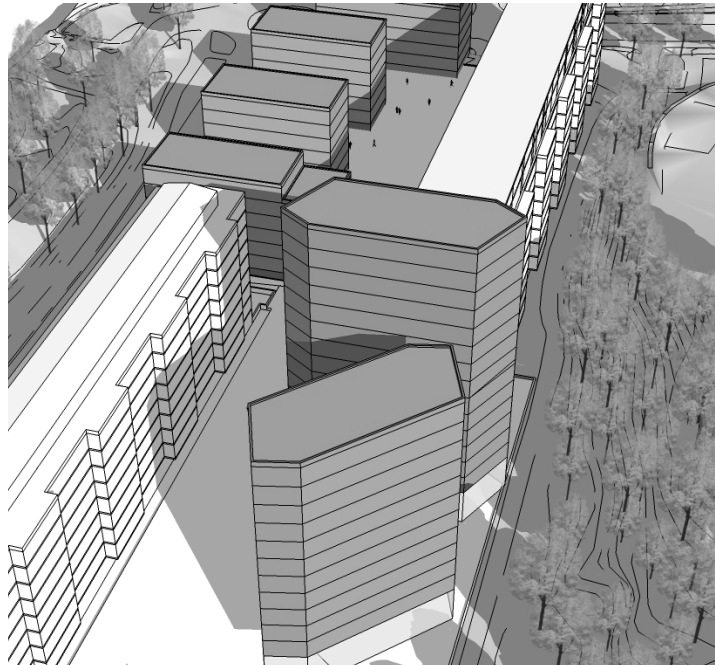

- 08:00-09:00 Solljus når i stort sett hela fasaden
- 09:00-15:00 Skuggan från det lägre punkthusen vandrar över fasaden
- 15:00-16:00 Solljus når i stort sett hela fasaden
- 17:00-18:20 Fasaden skuggas av befintligt hus upp till och med våning 8.

FASAD B

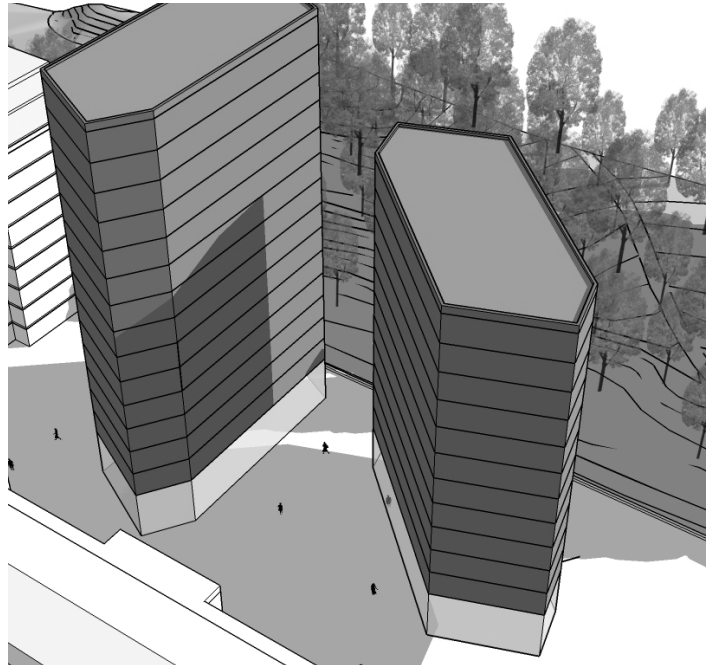

- 08:00-16:00 Fasaden skuggas helt
- 17:00-18:20 Skugga från det högre punkthuset och befintligt hus vandrar över fasaden. De tre nedre våningarna nås aldrig av sol.

SOLSTUDIE - KOMPLETTERING

21 Mars - Vårdagjämning

10:30
Punkthusens påverkan på befintlig fasad.

10:30
Ljusförhållanden mellan punkthus.
